

ABSTRACT

A cutter comprising a first handlebar and a second handlebar, one end of which serves as coupling end to couple handlebar and the other end comprises a first cutting
5 section, a second cutting section and a third cutting section; a bracing section extends on top of the second handlebar; a drilling plate structure fixed on the bracing section, the drilling plate comprises a cutter groove for the cutter body to cut in and semi-arc drilling grooves corresponding to the second cutting section and the third cutting section. User can apply first cutting section and the corresponding cutter groove for V-shape opening,
10 the second cutting section and the corresponding cutter groove to cut pipes and the second cutting section and the corresponding cutter groove to cut wires.
